SUMMARY

Senior Unity Developer with 4+ years building and shipping mobile games in C#. Primary developer on Mystic Motors, a live real-time multiplayer racing game on Google Play and the App Store with 10K+ downloads, working across gameplay, networking, Firebase, monetisation and mobile performance. Former Team Lead of 6 developers. Uses AI coding tools daily to deliver faster, and checks the results on real devices.

EXPERIENCE

Senior Unity Developer | TEC Ventures Pty Ltd, Australia (Remote) **Mar 2025 - Present**

- Took **Mystic Motors**, a spell-based 8-car multiplayer racer, through launch on Android and iOS and 8 App Store releases, with clans, chat, a garage and cosmetics.
- Delivered a **.NET dedicated game server** over UDP (LiteNetLib) using AI-assisted coding: server-run bots, finish-order and spell validation, and basic speed and teleport checks. Connected it to the Unity client, tested it, and deployed sandbox and production on DigitalOcean.
- Built **Firebase** features: Google, Apple and guest sign-in, Firestore, Realtime Database lobbies and matchmaking, Cloud Functions, App Check, FCM notifications and Crashlytics.
- Built the original clans and social system with Socket.IO and Node.js, on both the Unity and server sides.
- Integrated **in-app purchases** on Android and iOS, AdMob ads, shop offers and crate rewards.
- **Reduced overheating and frame drops** on phones: cut draw calls from about 900 to 300-500, added LODs, skipped distant and off-screen objects, replaced heavy particles, and warmed up shaders during loading to stop spell hitches.
- Developed car physics, bot racing AI, the spell system, VFX and custom shaders, plus baked lighting and collision work on race maps in URP.
- Fixed launch crashes using Crashlytics and device logs, including an iOS-only crash and a 40-second iOS login hang.
- Built game UI from Figma designs with DOTween, and custom Unity Editor tools for map and content work.

Unity Developer, promoted to Team Lead | Abhiwan Technology Pvt Ltd **Oct 2022 - Mar 2025**

- Led a team of **6 developers** for about 6 months on client Unity projects across mobile and PC.
- **Teen Patti:** built the Unity client and game logic for a real-time card game using Socket.IO with a Node.js backend; tested 10 rooms of 6 players at the same time and delivered it to the client.
- **Multiplayer virtual classroom:** students and teachers join one shared room, built with Photon PUN2 and Agora voice chat.
- **Adventure Trip: World Wonders** (Google Play, 1K+ downloads): built solo for a client, with 20 locations, 7 mini-puzzles, Firebase cloud save and FCM notifications.

PROJECTS

Mystic Motors (Google Play | App Store): live multiplayer racer built in Unity 6 with URP, Firebase and a .NET server.

Adventure Trip: World Wonders (Google Play): educational puzzle game across 20 world wonders, built solo for a client.

Kitty Dash (Google Play): my own endless runner, built and published solo, with Addressables and AdMob ads.

Slot Game (Live WebGL demo): browser slot game with reel logic in C#, DOTween animation and UI from Figma designs.

Other client games delivered: Ludo, a Flappy-style game with a tournament system, and a fish-growth arcade game.

TECHNICAL SKILLS

Unity: Unity 6, 2D/3D, C#, URP, Shader Graph, VFX, Addressables, Unity Profiler, Editor scripting, WebGL

Multiplayer: UDP (LiteNetLib), Photon PUN2, Socket.IO, Agora Voice SDK

Backend: Firebase (Auth, Firestore, Realtime Database, Cloud Functions, FCM, App Check, Crashlytics), .NET, Node.js, REST APIs, DigitalOcean, Postman

Mobile: Android, iOS, In-App Purchases, AdMob, Google Play Console, App Store Connect, Android Studio, Xcode

Tools: Git, Figma, DOTween, Claude Code, OpenAI Codex, Unity MCP

EDUCATION

BCA, Hi-Tech Institute of Engineering & Technology **2020 - 2023 | 70%**

Intermediate (PCB), P.C. Senior Secondary School **2020 | 75%**
